Dear Cape Cod Commission members:

Thank you for the work on the Regional Policy Plan. I have serious concerns for a livable future for my grandchildren unless we take giant steps to not just mitigate the effects of our climate crisis, but also take measures to reduce our contributions. We need **bold regional** leadership in order to effectively deal with our problems.

To that end please set audacious goals :

Set GHG goals in line with the Cape Cod Climate Change Collaborative

Require that building development be carbon neutral by 2030

Promote renewable energy through regulation

Promote zero waste through point source reduction

Require tree planting to sequester carbon when appropriate

Promote carbon pricing

Thank you for this work,

Lois Fournier
