COMMISSION

## Appendix E: Bicycle/Pedestrian Counts

Cape Cod Commission Traffic Counting Report 2016  
Counts Conducted 2006-2016

CAPE COD  
COMMISSION

## CAPE COD BICYCLE/PEDESTRIAN COUNTS

The Cape Cod Commission's Summer Traffic Counting Program performs bicycle and pedestrian counts at various multi-use path locations on Cape Cod as well as at numerous intersections during the course of recording turning movements. The data presented in this appendix include detailed data collected at Multi-Use Paths and simpler summary data collected at intersections. These data types are discussed below.

### **Multi-Use Path Data**

Data collection techniques follow a uniform method used throughout the state, which includes distinguishing six specific categories of multi-use path users.

Each location is identified by a site code, listed on the data sheet as "BPSite#." All counts differentiate directional data using a two-letter abbreviation (EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound). For user categories where helmets are applicable, calculations present the percent of users wearing a helmet. Boxes with blank values do not have applicable data.

The following descriptions explain the types of multi-use path users identified during the counts:

**Bicyclists:** These data include all users operating or contributing to the operation of a bicycle. A tandem bicycle operated by two people is counted as two bicyclists. A child being towed in a carrier is not considered a bicyclist. Some counts distinguish the number of helmeted bikers versus non-helmeted.

**Skaters:** Skaters are roller-skaters or in-line skaters. Some counts distinguish the number of helmeted bikers versus non-helmeted.

**Walkers:** This category includes all users walking on the multi-use path. This category may include people pushing a baby carriage or walking a pet (pets are not included in the count).

**Joggers:** This category includes all users jogging and running along the multi-use path.

CAPE COD  
COMMISSION

**Child in Carrier:** This category refers to many different users. A Child in Carrier could be a child being pushed in a baby carriage, a child towed behind a bicycle in a carrier, or a child in a seat mounted to another bicycle (not a trailer).

Data are sorted by facility name. Please refer to the following examples to better understand user classification.

Two Bikers

Two Bikers

One Biker, one  
Child in Carrier

One Walker, one  
Child in Carrier

One Skater

One Biker,  
two Child in Carrier

Other

Other

Other

### **Intersection Data**

Cape Cod Commission staff perform a varying number of manual turning movement counts each year at intersections throughout Barnstable County. Observations are recorded typically starting at 4 p.m. and last for one and a half hours to two hours.

The data summarized in the appendix includes the following information:

- **Site Code**: unique identifier number for each intersection
- **Date/Time of Study**: shows day of week, date, and range of times when the data were collected.
- **Bicycles Observed during Study Period**
- **Pedestrians Observed during Study Period**
- **Estimated bikes/day**: this is a calculated value obtained by multiplying the hourly average number of bicyclists by 10.
- **Estimated pedestrians/day**: this is a calculated value obtained by multiplying the hourly average number of pedestrians by 10.

The data are grouped by town beginning with Bourne on the Upper Cape extending to Provincetown in the Outer Cape. Within each town the data are sorted alphabetically by major road.
