

Memorandum

CAPE COD
COMMISSION

DATE: April 30, 2020
TO: George Meservey, Orleans Town Planner
FROM: Cape Cod Commission Staff
RE: Orleans Wayfinding Project

As part of the Orleans Signage/Wayfinding Plan project, Cape Cod Commission (Commission) staff has completed a draft survey of existing wayfinding signage in downtown Orleans and plans to present an overview of the survey at an upcoming Planning Board meeting. The purpose of this memo is to provide the Planning Board with the draft survey information in advance of the meeting.

BACKGROUND

The Town of Orleans asked the Commission for assistance in preparing a “wayfinding” plan to facilitate improved movement for motorists, transit users, pedestrians, and bicyclists in the downtown core of Orleans and to key destinations throughout town. This effort builds on previous studies the Commission prepared for the town, including a 2011 Streetscape Plan, which the Board of Selectmen adopted, and a 2018 Parking and Circulation Study. The project will produce wayfinding recommendations for both physical elements such as signage or pavement treatments as well as possible technological options.

FOCUS AREA

The focus area for the Commission’s existing conditions review is the downtown area (shown in the map), generally bounded by the Cape Cod Rail Trail, the Route 6A/Route 28 roundabout, Town Cove, and Eldredge Parkway/West Road, but also includes consideration of motorists entering town from the Exit 12 interchange and town beaches.

Map of the focus area for the study

EXISTING CONDITIONS SURVEY – METHODOLOGY

Commission staff conducted a site visit to the study area in January 2020 to collect data on wayfinding signage and features. Using the Survey123 GIS-based collector application, staff walked through the area, and entered the following information for each wayfinding sign/feature:

Geolocation of sign

Material: Wood, metal, fiberglass, other

Location:	Next to roadway, next to sidewalk (and not next to roadway), between sidewalk and roadway, set back from sidewalk and/or roadway
Type:	Parking, Beaches, Cultural, Orleans Center, Transit, Bike route, Amenities, Navigation, Other
Ownership:	Town, State, Private, Multiple
Audience:	Pedestrian, Bicyclist, Driver (automotive), Transit user
Sign Condition:	Excellent, Good, Poor
Photograph of sign	

EXISTING CONDITIONS SURVEY

The following are Commission staff's general observations from the site visit. A compilation of the existing wayfinding signage is provided on the following pages.

Observations

VARIED WAYFINDING ELEMENTS FOR ORLEANS CENTER

A mix of interesting wayfinding elements helps users understand they are in Orleans Center. This includes distinctive brick striping in the sidewalk, public art pieces, and lamp posts of a certain style used only in Orleans Center that signal to people they are downtown. These represent examples of non-traditional wayfinding elements that are not typical directional signs but convey to people that they are in a certain area.

VARIED DESIGNS

Town signage to key destinations such as beaches, information, and parking areas is composed of varied designs and styles. Many use a blue and white palette, although their shape, size, and graphics styles may differ. Signs pointing to public and private parking lots, for example, may use the blue background/white lettering style or may be white with green lettering. Some beach signs are the blue and white style but others are black lettering on white.

MASSACHUSETTS DEPARTMENT OF TRANSPORTATION (MASSDOT) SIGNS

There are several MassDOT signs located at intersections throughout the study area providing directional guidance to Orleans Center and points beyond including South Orleans, Pleasant Bay, Chatham, and Provincetown. These signs are generally larger than the Town signs and have a consistent design.

WORDS AND GRAPHICS

The majority of the signs surveyed rely primarily on words for relaying information. Cape Cod Rail Trail signage and a few others include or rely solely on icons or graphics.

OPPORTUNITIES FOR CONSOLIDATION

Several locations within the study area contain multiple signs within close proximity to one another. These places may present opportunities to consolidate multiple and duplicative signs to help reduce visual clutter and make it easier for users to read and interpret the information.

DESTINATION DISTANCES

The Massachusetts Department of Conservation and Recreation signs along the Cape Cod Rail Trail provide distances for bicyclists and pedestrians to various destinations. Providing travel time and/or distance can be helpful in locations with bicycling and pedestrian activity (such as a town center) and can be useful in shaping decisions of where to go. Such signs also feel welcoming to bicyclists and pedestrians and may help encourage more to travel on foot or by bike.

INTERPRETIVE SIGNAGE

Several historic interpretive signs are located within the study area and more are being planned. They do not have a direct wayfinding component, but they help convey the significance of the downtown area and could be linked more to wayfinding elements.

OTHER DESTINATIONS

Commission staff noticed minimal wayfinding signage for attractions or destinations such as the library and baseball field and seeks input from the Planning Board and community members on other destinations that may need additional wayfinding signs. An interactive mapping exercise planned for the first public workshop will provide an opportunity to identify destinations needing wayfinding signs.

NEXT STEPS

Commission staff will present the signage inventory to the Planning Board meeting at their convenience and incorporate both the inventory and feedback from the Planning Board into the material for the upcoming public workshop.
